

BPL has the very great potential to be a far more serious liability than any value it may convey. Radio waves do not recognize international borders, nor are they likely to follow the dictates of political or commercial policy. Radio frequency interference can be powerful disrupter of other electronic systems that can frustrate nearly any effort to trace or control. BPL is a very serious mistake. It is a potential disaster that can - - nay will! -- prove nearly impossible to control once unleashed. In the worst of times, it will prove to be the worst of decisions. I very strongly oppose BPL and urge the Commission to reconsider the consequences of what I believe is a very bad decision. Again, please refuse the grant of BPL!
